The diagram illustrates the relationships between three database tables: **list_pesanan**, **database_konsumen**, and **data_pesanan**. **list_pesanan** is connected to **data_pesanan** via a dotted line from its **id_data_pesanan** field to **data_pesanan**'s **id** field. **data_pesanan** is connected to **database_konsumen** via a dotted line from its **id_pemesan** field to **database_konsumen**'s **id_data_konsumen** field. Additionally, a solid line connects **database_konsumen** to **data_pesanan** through a junction point, indicating a relationship between the consumer data and the order data.

The diagram illustrates a table structure for 'data_konsumen'. It features a dark gray table with a blue border. The table has a header row with a grid icon and the text 'data_konsumen'. Below the header, there are ten rows, each representing a field in the table. Each row starts with a data type icon (a blue '123' for integers and a blue 'A-Z' for strings) followed by the field name. The fields are: 'id' (integer), 'nama_pemesan' (string), 'alamat' (string), 'provinsi' (string), 'kabupaten' (string), 'kecamatan' (string), 'desa' (string), 'nomer_hp' (integer), 'konten' (string), and 'created_at' (timestamp, indicated by a clock icon).

The diagram illustrates data flow from a table named 'antrian_input_desain' to three different components. The table has four columns: 'id', 'id_cs', 'id_pemesan', and 'id_data_pemesan'. Dotted lines connect the 'id' column to a diamond-shaped node, the 'id_cs' column to a circle node, and the 'id_pemesan' column to another circle node. From these nodes, dotted lines extend upwards and outwards, suggesting further data processing or storage.
